Pumps, Submersible Pumps, Submersible Basin
Mixer, Single Stage Vertical Inline Pumps & more..

Air Operated Diaphragm Pumps

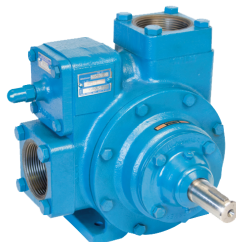

Sliding Vane Pumps, System One Centrifugal
Pumps, Regenerative Turbine, Screw Pumps

Submersible Pumps, Self Priming Pumps, Booster
Pumps

Mag Drive Internal Gear Pump, Universal Bracket
Internal Gear Pump. Asphalt Gear Pump

Equipment Efficiency & Reliability Consultation

We will help you find the best solutions for upgrading & repairing your equipment.

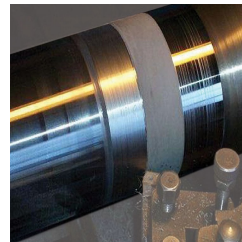

Equipment Rebuild & Upgrade

We have an expert rebuild shop for many types of equipment. Our team will diagnose your causes of failure and help you upgrade equipment to prolong life.

Certified Mechanical Seal Rebuild Center

We rebuild all brands and types of Mechanical Seals. We are the only west coast certified rebuild center for Chesterton.

Equipment Restoration

We can build up and machine your old shafts & impellers to original tolerances saving you money over buying new.

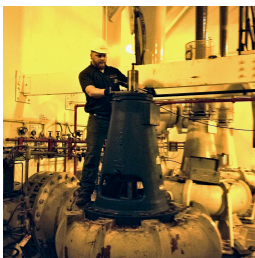

Machine Shop

We specialize in modifying your old equipment with new technology. Often we can modify an old piece of equipment for a fraction of the cost of replacement and increase reliability and efficiency.

OEM Replacement Seals

We stock & carry a full line of replacement mechanical seals for most rotating equipment.

Field Service & Maintenance

Our techs can come work on site to help remove & replace or repair your equipment in place.

Dynamic Balancing

We can balance your rotating equipment to help achieve maximum life. We can now balance up to 2,200 lbs. and a 68" dia. We can also field balance some equipment.

Laser Alignment

Most equipment gets installed without being aligned properly. This can fail your couplings, bearings and seals long before they should. Let us help you prolong your mean time between failures.

Vibration Analysis

If your equipment is rattling and shacking you could be loosing power and efficiency and prematurely failing your equipment. Our techs can analyze and diagnose your vibrations and help solve these problems.
